~~TIMEPIECE WITH TWO ROTATING BEZELS~~

The timepiece includes a case (1) formed of a back cover (3) and a middle part (2) closed by a glass (4) arranged above a dial (5) with an analogue or digital display, delimiting the housing of a watch movement (6), said glass (4) being surrounded by two external rotating top (10) and bottom (20) bezels, superposed on a shoulder (8) of the middle part (2). It is characterised in that the two bezels (10, 20) and the shoulder (8) have identical or similar non-circular or non-symmetrical contours in relation to the centre of the dial (5) in the superposed position, and in that the bezels (10, 20) can occupy a first rest position in which concealed parts (9) of the shoulder (8) and/or concealed parts (23) of the bottom bezel (20) are made visible after rotation of at least one bezel (10, 20).
